

- Tolerates wide range of pH (3.3 – 9.5), capable of pH up to 12.5!
- Phytoremediation of Al, Mn, Na, Mg, As, Cd, Cu, Cr, Ni, Hg, Pb, Se, Zn.

Non-invasive:

- Does not set fertile seed
- No stolons or rhizomes
- Not a host for pests or diseases of other plants.
- Easily removed/killed when no longer required.

- Stiff and erect leaves capable of withstanding flowing water up to 5m/second!
- Forms living hedges capable of holding back floods, slowing water flow, and filters suspended sediment reducing soil loss.

Farmers using VS to shape, support, and protect terraces which allow them to farm important vegetable crops on land that was previously unusable (Bali, Indonesia)

- Vetiver grass forms permanent vegetative hedges which slow surface water flow, trap sediment, and eventually form natural terraces!

Cross-sectional view of a 2-year old vetiver hedge.

VS in Malaysia, reducing soil and moisture loss.

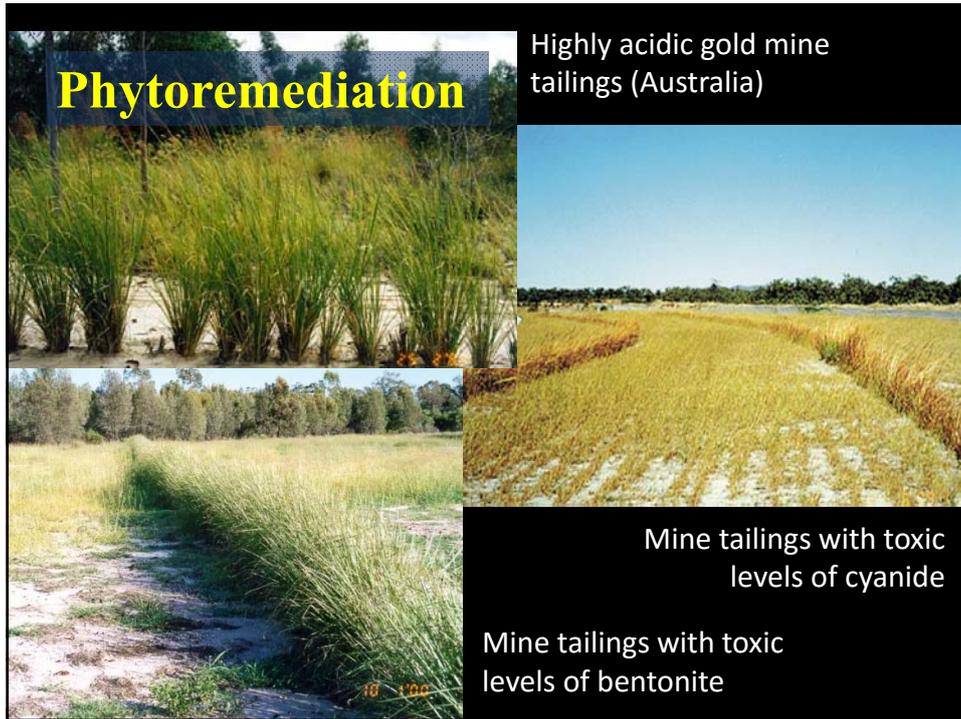

Nutritional values of **Vetiver**, **Rhodes** & **Kikuyu** grass in Australia

The Vetiver Network International
 Proven & green environmental solutions

Patron - H.R.H. Princess Maha Chakri Sirindhorn of Thailand

The Vetiver System Organic "glue" to support sustainable development at all scales

Infrastructure Investment
 Protect communities and their roads, bridges, dams, railroads, buildings, ports, river banks and levees. Control sedimentation of water bodies. Reduce infrastructure maintenance costs. Rehabilitate lands.

Socially Sound Development
 Protect water supplies. Clean polluted water. Decrease water-borne diseases. Treat wastewater and sewage. Mitigate industrial and mining pollution. Reduce vulnerability to climate change and natural disaster. Protect and provide livelihoods.

Agriculture Productivity
 Stop soil loss. Increase and conserve soil moisture. Protect soil fertility. Increase productivity of agro-forestry and reforestation. Improve small scale and commercial farming. Sustain hillside agriculture. Increase forage production. Protect agricultural lands and infrastructure. Reduce pollution from sediments and pesticides.

TVNI Mission
 The Vetiver Network International (TVNI) promotes the worldwide use of the vetiver system (VS) for a sustainable environment particularly in relation to land and water.

Please support TVNI operations with a donation (your tax deductible donation will generate an emailed receipt)

Vetiver Plant Suppliers

Vetiver System plant suppliers play a key role in the promotion of the Vetiver System. Note: this list is far from complete. We are happy to publish particulars about vetiver grass nurseries, suppliers, and VS installers. In addition TVNI certifies Vetiver System providers as to their competence and technical excellence. We encourage certification. Once certified they are [listed](#) on this website. New clients can be reasonably assured of a good service from those certified.
