Agriculture Risk Management Planning and Scoring

© 2013, Steve Hodges, African Agriculture Risk Management Services (AARMS)

Risk Management Planning assumes that assessment of risks has taken place, and that risks have been prioritized according to severity, likelihood, and manageability of the risks. The resulting risks can then be placed on the scoring grid below and actions identified to address the risks. Once actions are scored, the ones scoring highest can then be placed into the Risk Management Action Plan Grid

Rate in each column according to: 1=Not true, 2=Low, 3=Medium, 4=High, 5=Very High					
List Priority Risks Below (from high to low)	how effective	afford-ability of cost	technical assist. available	timely	culturally acceptable
